

I found some info online . This is the official EMA portal looks like. The license holder will submit the application through such unique portal

Based on the content of your PDF, your website project appears to be a **business proposal** for a **service platform** that facilitates EMA (Energy Market Authority) electrical license applications and renewals in Singapore. Here is an analysis of potential legal and regulatory risks, particularly regarding **infringement**:

I was doing some research work on infringements. There are some guidelines to follow. We are on a low risk guys 😊👍

## 5. Financial and Payment Compliance

If you collect fees on behalf of clients (e.g., for EMA submissions), ensure transparent billing and avoid any appearance of collecting official fees under false pretenses.

---

## Recommendations to Mitigate Risk:

### 1. Clear Branding & Disclaimers

- Use original logos and branding.
- Add a disclaimer page clarifying your role as a service facilitator.

### 2. Avoid Copying Official Forms

- Do not reproduce official EMA or SP forms without permission. Instead, guide users on where to access them.

### 3. Compliance with SS 638:2018

- If offering inspection services, ensure all work complies with Singapore's electrical safety standards.

### 4. Transparent Pricing

- Clearly distinguish between your service fees

## **Likely Low-Risk Areas:**

1. **No Copyrighted Material** – The content in the PDF is generic, process-oriented, and informational. There's no indication of copied text, logos, or proprietary content from EMA, SP Group, or other entities.
2. **Service-Based Model** – You are offering a facilitation service, not claiming to be the official government portal. As long as you clearly state you are a third-party service provider, there should be no confusion.
3. **Use of Public Information** – Information about EMA license grades, application processes, and SP Group procedures is publicly available and not copyrighted.

## **Summary:**

Your website is unlikely to infringe copyright or trademarks if you use original content and avoid official logos. However, you must be careful not to misrepresent your service as official, and ensure compliance with data protection and electrical industry regulations.

## **Potential Risk Areas to Address:**

### 1. Use of Logos or Official Branding

If your website uses SP Group, EMA, or PUB logos without permission, this could constitute trademark infringement. Use only if you have permission or create your own branding.

### 2. Misrepresentation as an Official Entity

Avoid language that suggests you are an official government or SP Group site. Include clear disclaimers such as:

"We are an independent service provider and are not affiliated with EMA, SP Group, or any government agency."

### 3. Data Privacy and Security

Since you'll be handling client and LEW (Licensed Electrical Worker) data, ensure compliance with Singapore's PDPA (Personal Data Protection Act).

### 4. Licensed Electrical Worker (LEW) Regulations

Your service involves LEWs performing inspections. Ensure you are not facilitating unlicensed work or misrepresenting LEW credentials.

Mostly importantly, don't reproduce any logos

1. Singapore power
2. EMA - energy market authority
3. If we have to use , such as form , application forms , - include clear disclaimer to use.
4. Last but not least , data protection ( I think, we need Jinsoo on this ) PDPA. Personal data protection act .

As user keys in their personal data information, this part ( we need to further define )

I am not sure , likely a disclaimer rights ? How does Kakao Talk protects this ?

I am a night owl 🦉

Catch up soon brothers ...

Henceforth, low risk towards legal infringements ! Let's make money! 💰

Coming Monday ,

Kelly will register and pay for Singapore PDPA course - to certificate her as PDPA officers.
